# Weather Key Points

Regional Operations Center

Western Region

Sunday, October 30

- Dry weather will continue across the state through Monday afternoon, with breezy winds bringing locally elevated fire weather conditions to the Los Angeles and Ventura County mountains and valleys, especially on Sunday
- A storm system will cross the state through mid to late week, bringing an increase in lower elevation rain, higher elevation snow, and gusty winds for many areas as well as notably cooler temperatures
  - **Impacts:** No widespread burn scar impacts are currently expected from this event as much of the moisture looks to be very beneficial. Some impacts to travel from accumulating snow are possible at times through Thursday, especially above 4,000-5,000 feet. Potentially impacted areas include I-80 over the Sierra, portions of I-5 in far northern California, and the Grapevine in southern California.
  - **Timing:** Precipitation arrives Monday night and Tuesday across northern California, becoming more spotty on Wednesday. Across southern California, a few showers are possible on Tuesday but better precipitation chances arrive later Wednesday and Thursday.
  - **Snow:** Moderate to locally heavy mountain snow is expected above 6,000 feet through Wednesday, especially over the Sierra. However, snow levels will fall quickly to 3,000- 4,000 feet across northern California and down toward 4,000-5,000 feet across southern California through late week.
  - **Temperatures:** Near-freezing temperatures could develop for portions of the Central Valley Wednesday through Friday nights, and readings could dip into the upper 30s even for some areas closer to the coast across northern California
  - **NOTE:** Some uncertainty remains regarding the exact timing and strength of this storm that could impact precipitation amounts

# Precipitation Forecast

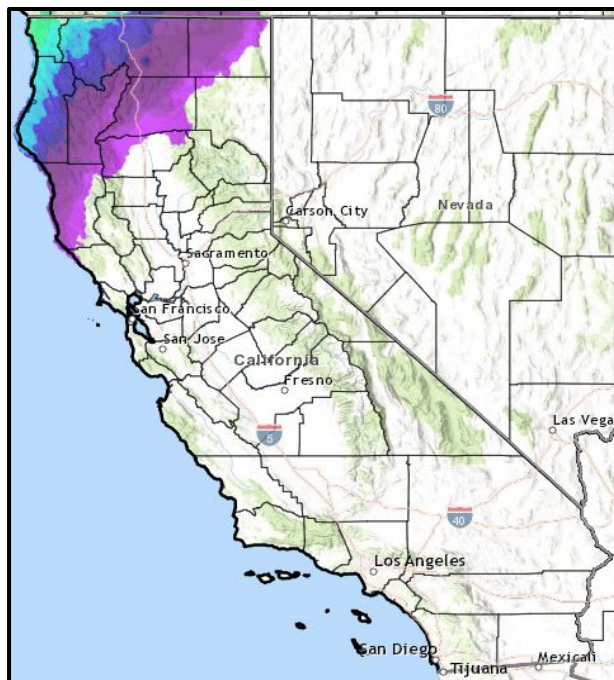

Regional Operations Center

Western Region

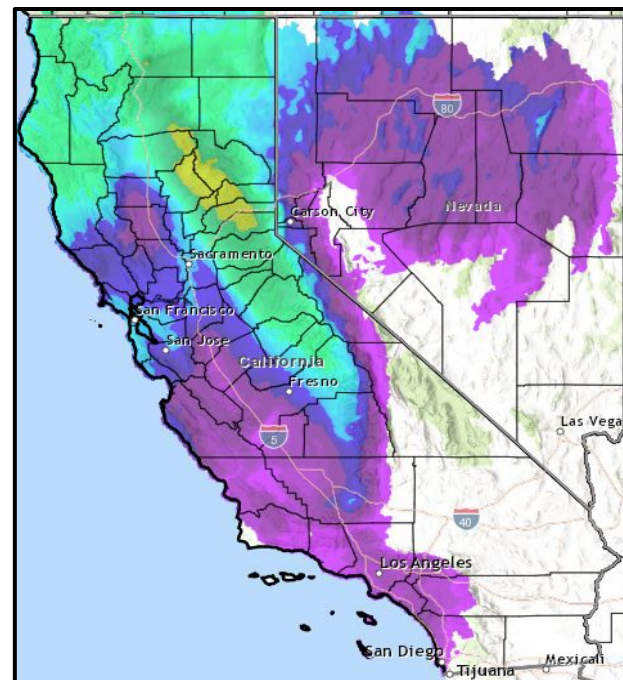

Sunday, October 30

Sunday

Monday

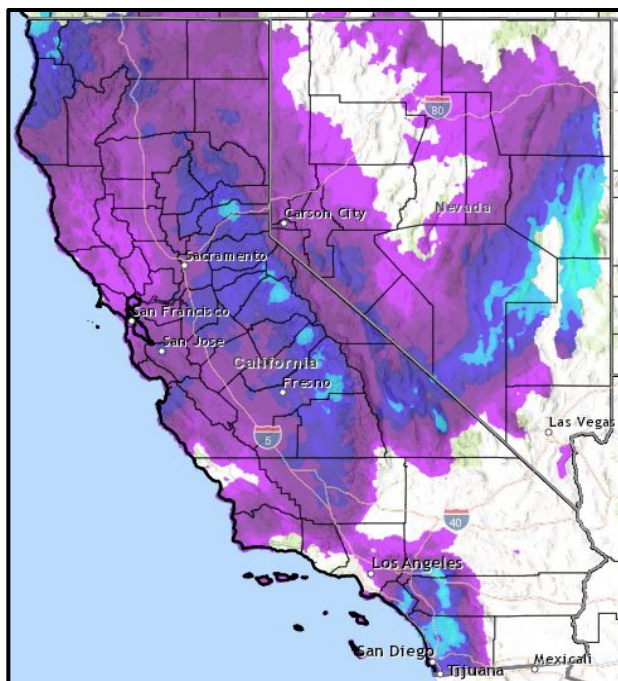

Tuesday

**Important Note:** Forecast precipitation amounts are an average for any particular location. Thunderstorms will produce locally much higher rainfall amounts.
